AB **Maraging** steel sheet having an improved fatigue strength is manufd. by cold working with a soln. treatment followed by **nitriding**. Thus, an endless belt semiproduct from 250 kpsi-grade **maraging** steel was cold-worked (40%), and then soln.-treated for 10 min at 570.degree.. **Residual** compression stress in the belt was decreased from 95 without cold working to 78 kg/mm2.
